The holiday season is a time for Christmas cheer and many people like to celebrate by adding some roof decorations Christmas. There are many types of house roof Christmas decorations and it is important for everyone to place their safety first when hanging decorations. With so many types of rooftop Christmas decorations, it is important for everyone with a shingle roof to know how to put decorations on the roof.

Safety First

The most important thing people should remember when learning how to attach decorations to the roof is that safety should always come first. Never try to put up Christmas lights when there is snow or ice that is visible on the ground or on the roof. In addition, do not hang lights during wet weather conditions. Make sure that any and all building and safety codes are followed. These have been put in place to make sure that everyone is safe. Try to avoid standing on the roof, as this can damage the shingles. Lastly, do not hang these lights alone. Make sure that someone else is always present in the event that an accident might occur.

Using Christmas Light Roof Clips

Those who are wondering how to mount decorations on the roof need to use plastic clips that are designed to hang on gutters. This is preferable to attaching lights directly to the roof, as the lights might damage the shingles. If there isn't a gutter on a certain

part of the roof, place the clips to the drip edge. Do not lift the shingles as this might damage the sealant. Finally, you may prefer to use adhesive strips that will attach the lights to the face of the home. Avoid puncturing the surface of the home or the shingles.

The Types of Roof Clips

There are a variety of clips that people might use to hang their Christmas lights on their roofs.

Simple Hooks: Simple hooks are the easiest clips to use for those wondering how to secure decorations on the roof. Simply place the line of lights into these hooks. Then, place the clip over the edge of the gutter.

Line Clips: These clips are also used to hook the line of lights; however, they hold the line a little bit tighter. Those who are icicle lights or rope lights work better with line clips.

Bulb Clip: Those who are hanging heavy bulbs will want to consider using bulb clips. These clips attach directly to the bulb, providing maximum precision. They create a more precise look because people can use the clip to point the bulb itself in the right direction.
